Subject: Paraquat human studies from the tox SR

Hi Ashlee and Stacy;

ICF sent me a list of the studies indexed inclusion/exclusion and the evidence stream (see attached). They are currently in the process of extracting data from all studies labeled "human primary" and will be uploading it to HAWC (if you aren't familiar with this tool, it is web-based freeware that is used as a repository for data extracted from studies and a place to report risk of bias analyses) for visualization purposes.
